Contracting on the Mighty Mo

Rip rap as it is loaded on the barge.

Looking upstream towards Fawn Island.

Over the past five years, the shores of the Missouri River sustained extensive damage from rapid snow melt and record-breaking rainfall. The damage to the Mighty Mo stretches from St. Louis, MO to Helena, MT. The U.S. Army Corps of Engineers manages the river and is tasked to keep this big and beautiful river as healthy as possible.

As you might expect, repairing the Mighty Mo requires unique contracting methods. L.G. Everist, Inc. is currently supplying quartzite rip rap to a project on Fawn Island, located upstream from the mouth of the Little Sioux River at River Mile 674.

This project is part of the Missouri River Recovery Program and consists of approximately 19,000 tons of 750 pound (top size) rip rap. The quartzite rip rap, produced in Dell Rapids, SD, is railed to Sioux City, IA, and then truck hauled to the project where it is loaded on barges and tugged to specific locations for placement. A track-type excavator then places the rip rap from the barge to the damaged shoreline. The contractor is utilizing two barges to keep the material flowing smoothly.

The Fawn Island work is one of many projects currently underway by the Missouri River Recovery Program. We would like to commend the U.S. Army Corps of Engineers and all of the on-site contractors for their **Rock Solid** efforts to repair and preserve the shores of the Mighty Mo.

~ Mark Hoffman

“Cuando usted pone su mano en un río,
se toca el último que ha pasado antes y
el primero de lo que está por venir.”
Leonardo DaVinci

We Deliver Solutions!

Contratante en el Mighty Mo

Rip rap ya que se carga en la barcaza.

Mirando hacia aguas arriba del Fawn Island.

En los últimos cinco años, a orillas del río Missouri sufrieron grandes daños por el rápido derretimiento de la nieve y precipitaciones récord. El daño a la Mighty Mo extiende desde St. Louis, MO a Helena, MT. Los U.S. Army Corps of Engineers administra el río y tiene la tarea de mantener este río grande y hermoso lo más saludable posible.

Como era de esperar, la reparación de los Mighty Mo requiere métodos de contratación únicos. L.G. Everist, Inc. está actualmente suministrando cuarcita rip rap a un proyecto sobre Fawn Island, situada aguas arriba de la desembocadura del río Little Sioux en el río Milla 674. Este proyecto es parte del Programa de Recuperación del río Missouri y consta de aproximadamente 19.000 toneladas de 750 libras (tamaño superior) rip rap. El rap rip cuarcita, producida en Dell Rapids, SD, se criticó a Sioux City, IA, y luego de camiones transportados al proyecto en el que se carga en barcazas y tiró a lugares específicos para la colocación. Una excavadora de tipo de pista y luego coloca el rap rasgón de la barcaza a la costa dañada. El contratista es la utilización de dos barcazas para mantener el material fluya sin problemas.

El trabajo Fawn Island es uno de los muchos proyectos actualmente en curso por parte del Programa de Recuperación del río Missouri. Nos gustaría felicitar a los U.S. Army Corps of Engineers del ejército y todos los contratistas en el lugar por sus esfuerzos **Solid Rock** para reparar y preservar las costas del Mighty Mo.

Estamos encantados de dar la bienvenida a **Katherine Sestak** a LGE. **Katherine** se unió al departamento de contabilidad el 12 de octubre. Ella va a trabajar con las cuentas por pagar y por cobrar. **Katherine** es un nativo de Sioux Falls y un graduado de la Universidad de Dakota del Sur. Ella y su esposo Corey residen en Sioux Falls. Ellos disfrutaron de actividades al aire libre como camping, esquí, y en funcionamiento.

Bienvenido a bordo **Katherine!**
