"What does L. G. Everist do?"

By Mark Redlin, VP Midwest Division

After someone hears that you work for L. G. Everist, are you met with more questions? Typically something like, "What do you do there?", "What does L. G. Everist do exactly?" or something along those lines.

Well, aside from the general answer of "Making big rocks into little rocks", L. G. Everist actually, produces materials that help build America!

Queue the response – "Really? How is that?"

Most of the aggregate materials we supply go to companies that produce asphalt and concrete. Two of such companies, Sioux Falls based Myrl & Roy's Paving and Ace Ready Mix, are within the L. G. Everist family. These companies pave roads, develop parking lots, and supply materials for housing developments as Sioux Falls and the surrounding areas continue to expand.

Asphalt against Curb and Gutter

Ace Ready Mix - 9 Mile Park

Of course, all these projects also require base aggregate materials, pipe bedding for water and sewer installation, as well as specialty products such as a specific rock gradation used to backfill bridge wall abutments. Our five rock quarries, as well as our sand and gravel plants, work hard to produce a variety of materials that will be available for distribution to ensure projects can be completed in a timely manner.

Myrl & Poy's Asphalt Plant - Rice St

Construction aggregates aren't the only material that is produced and supplied by L. G. Everist, Inc. Our rock quarry in Jasper, MN produces dimension stone that is used for stone facia on buildings, headstones to remember loved ones, and even the bases for the sculptures that are displayed around the Sioux Falls area.

Statue Base

You can also find our products on the golf course. We provide high-quality sand used to top-dress the fairways and greens of golf courses throughout the Midwest region. Additionally, our Colorado locations supply a significant amount of sand to golf courses in that area.

As can be seen, our materials are used in many ways to benefit our way of life. From safe, smooth roads to get to our destinations, level sidewalks that frame our neighborhoods, and even areas of recreation where the fairways are wide and the greens all slant to the cup, L. G. Everist, Inc. is proud to play a part. As employees, we should all take pride in our work and the diverse ways and places our products are utilized and showcased. Thank you to everyone!

Rip Rap Gradation

Quality Control is important in the world of aggregates because it ensures consistency, durability, and the performance of the materials that directly impact the safety and longevity of infrastructure projects. Here we see 12.5 tons of rip rap being separated and individually weighed. Coordinated efforts from the LGE QC team and the Army Corps of Engineers ensured that the rip rap met all necessary specifications. This rock was then loaded and sent south by rail, its final placement being along a washed out bank in Decatur, NE.

Employee PSA:

This is the last issue to find and piece together the (not-so) hidden phrase in August Roxsand's. Submit your answers to your managers and they will forward on the submissions to Megan. Reminder, do not share the phrase with those who haven't read the newsletters and figured it out themselves. There is a chance to win a nice prize!
