2023 Asphalt Plant Updates

2022 brought the acquisition of a new asphalt plant at Myrl & Roy's. In 2023 we will be installing new aggregate feeders as well as a new rap system. A new asphalt hot oil heater will be installed along with a remote asphalt oil tank/ plant monitoring system which will tell us real-time tank levels as well as asphalt oil temperatures, all this information can be accessed from a cell phone app, tablet, or PC. This system can also monitor silo temperatures if asphalt is stored overnight. If the asphalt oil temperature or asphalt stored in the silos drops below a set temperature or the hot oil heater shuts off an alert will be sent to your selected device. All of these upgrades will help reduce downtime and minimize overtime on repairs/maintenance and check heaters on the weekends.

Employee Spotlight: John Doese

John Doese started with Mryl & Roy's paving in 2003 as a Class B driver hauling a little bit of everything in his dump truck. In 2019 he was promoted to truck dispatching. Between following dirt track racing and attending his grandkids activities. John is the face of the Mryl & Roy's fleet from dispatching trucks hauling asphalt for the asphalt crews to hauling gravel to the grading crews along with keeping the hot plants and concrete plants full of aggregates and with hauling materials for outside sales customers we could not keep the trucking chaos organized without John's help. Thanks John for everything you do for our team!!!!

Actualizaciones de la planta de asfalto 2023

2022 trajo la adquisición de una nueva planta de asfalto en Myrl & Roy's. En 2023 instalaremos nuevos alimentadores de agregados, así como un nuevo sistema de rap. Se instalará un nuevo calentador de aceite caliente de asfalto junto con un sistema remoto de monitoreo de tanque / planta de aceite asfáltico que nos dirá los niveles del tanque en tiempo real, así como las temperaturas del aceite asfáltico, se puede acceder a toda esta información desde una aplicación de teléfono celular, tableta o PC. Este sistema también puede monitorear las temperaturas del silo si el asfalto se almacena durante la noche. Si la temperatura del aceite de asfalto o el asfalto almacenado en los silos cae por debajo de una temperatura establecida o el calentador de aceite caliente se apaga, se enviará una alerta al dispositivo seleccionado. Todas estas actualizaciones ayudarán a reducir el tiempo de inactividad y minimizar las horas extras en reparaciones / mantenimiento y revisar los calentadores los fines de semana.

Empleado destacado: John Doese

John Doese comenzó con la pavimentación de Mryl & Roy en 2003 como conductor de Clase B transportando un poco de todo en su camión volquete. En 2019 fue ascendido al despacho de camiones. Entre seguir carreras de dirt track y asistir a las actividades de sus nietos. John es la cara de la flota de Mryl & Roy desde el envío de camiones que transportan asfalto para los equipos de asfalto hasta el transporte de grava a los equipos de nivelación, junto con el mantenimiento de las plantas calientes y las plantas de concreto llenas de agregados y con el transporte de materiales para clientes de ventas externas, no podríamos mantener organizado el caos de camiones sin la ayuda de John. Gracias John por todo lo que haces por nuestro equipo!!!!
